## Using Technology to Reduce Social Isolation and Promote Healthy Aging

The key elements for equitable access and inclusion are:

1. Devices – A handheld tablet provides a lifeline for vulnerable older adults. We have customized the Amazon Fire tablet to support the needs of new users.
2. Internet Access – Affordable Wi-Fi service is critical. We assist low-income older adults in registering for special programs like Comcast's Internet Essentials.
3. Learning and Support – We provide a variety of options such as applications on the tablet, a curated website with training videos, and in person assistance.
